

Using Proportions to Solve Percent Problems

$$\frac{\text{is}}{\text{of}} = \frac{\%}{100}$$

13 is 70% of what number

13 is 70% of what number

$$\frac{13}{\text{of}} = \frac{70}{100}$$

13 is the IS 70 is the % and we want to find the of
Now you have a proportion set up...solve it.

$$\frac{13}{?} = \frac{70}{100}$$

$$\frac{13 \times 100}{70} \approx \boxed{18.6}$$

$$\frac{\text{part}}{\text{whole}} = \frac{\%}{100}$$

Elizabeth got 34 correct out of 40 questions on her test. What percent did she get correct?

Elizabeth got 34 correct out of 40 questions on her test. What percent did she get correct?

$$\frac{34}{40} = \frac{\%}{100}$$

34 is the part and 40 is the whole (notice the of?)
Now you have a proportion set up...solve it.

$$\frac{34}{40} = \frac{?}{100}$$

$$\frac{34 \times 100}{40} = \boxed{85\%}$$
